# TECHNOLOGY CONSULTING

**Application Assessment**

Commentors  
Application Assessment  
gives you a detailed technical  
function analysis of one or more  
applications. We will provide you with  
the best qualified fact-based analysis.  
Complete for you to make decisions re-  
garding your applications future. Including  
a tangible and objective SAD to work from.

# HOW TECHNOLOGY CONSULTING WILL MAKE A DIFFERENCE FOR YOUR ORGANIZATION

In line with the rapid technological development, companies experience a growing need for an independent technology and innovation partner, who, with the help of technology, can make visions come true.

Commentor can help you pick the right technologies for your business moving forward, as well as improve your current technology stack.

Together with you, we decide on the best technology combination for your company. This enables your visions to be implemented quickly. Our advisory team consists of some of

Denmark's most talented software consultants — a team who is accustomed to advising Denmark's largest companies when choosing business-critical software solutions.

With years of experience delivering business critical software solutions, we are able to better understand your needs and requirements than most other software innovators on the market.

To be frank, we want to make a difference for your organization and we love getting our hands dirty by actually implementing your solution based on our recommendations.

## APPLICATION ASSESSMENT – YOUR OUTCOME

The purpose of an Application Assessment is to provide a detailed technical function analysis of one or more applications to visualize the application's state of health.

It will give you the best qualified basis for making decisions regarding decommissioning, end-of-life, refactoring, renewal, consolidation, rebuilding, retirement, transformation, improvements and the likes of the application.

You will receive a fact-based analysis, which will mitigate the risk and costs of the following

phases, and thus reduce the cost of the implementation phase.

Upon completion of the Application Assessment, we will provide an independent and objective SAD (Software Architecture Document) with facts including detailed descriptions of our findings.

The SAD includes recommendations that you can either work on independently or get our help to implement. It's entirely up to you and the setup that fits best for your organization.

# HOW IT WORKS

## TECHNOLOGY CONSULTING – OVERVIEW

Our technical expertise comes from years of experience being a dedicated software development house. Our range of technology consulting services embraces the latest knowledge and hands-on experience within

software technology from our team of specialists. We offer a range of services as seen below. All of which can be used at your convenience as a grab 'n go model or with us at your side to implement areas of optimization and improvements.

## SERVICES

## T-SHIRT CONCEPT – KEEPING IT SIMPLE

To keep things simple, we use t-shirts as an abstraction to identify migration efforts and

expenses. It gives an understanding of the complexity of applications and platforms.

**Small** - Used on simple applications or platforms - Typically tool-based migration or implementation on an IaaS platform.

**Medium** - Used on applications or platforms that require limited custom interactions or newly developed solutions on an IaaS platform.

**Large** - Used on complex applications or platforms that require more customized interactions, such as special knowledge about the application, business, and / or requirements. These migrations are in most cases PaaS or in combination IaaS and PaaS.

**X-Large** - Applies to highly complex custom multitier application tones with high business critical value, large amounts of legacy and unsupported expenses in a PaaS setup.

Timeframe: 2-3 weeks

Timeframe: 3-4 weeks

Timeframe: 4-6 weeks

Timeframe: 8-12 weeks

## WHY COMMENTOR?

We do not believe in buzz words.

There, we said it! However, we do believe in facts and that is exactly what we relate to in our assessments and analysis services.

The facts we find through a thorough analysis of your IT system provides insights that uncovers a true picture of your IT system's health state.

With solid hands-on experience our experts create a fact-based report from which the recommendations can be adapted directly in your technology planning either as a grab 'n go model or with us at your side to implement areas of optimization and improvements.

## WHAT OUR CUSTOMERS SAY

“ Commentor quickly understood our business needs and managed to challenge our business processes. They took on the project with a high degree of professionalism, and came up with an excellent solution for our software architecture.

**Heidi Bøjlesen, IT Project Management,  
Energinet**

“ Commentor has a high degree of professionalism and gave us clear insight into what areas we should focus on. Based on the analysis they performed, we have implemented a state-of-the-art DevOps strategy for our EDI-platform.

**Peder Herbo, IT-manager & Executive  
Director, Forsikring & Pension**

## NEXT STEP

Contact us for an initial talk to touch base on your needs and expectations. We can guarantee that we only take on projects if we can see the value in it for your organization.

We are committed to deliver facts and solutions. That is why, when you choose to work with us, you can consider **IT done**.
